

## The Front Burner

*A Quarterly Newsletter Highlighting Product & Industry News*

### *See all our brands at ASHRAE / AHR Expo 2023*

The AHR Expo continues to be an important part of the HVACR industry, and we are proud to once again attend with all our teams to talk with you about your application needs.

Fenwal Controls, UTEC Controls, and Fireye marketing and sales teams will be at the show to talk about our latest products to help you solve your most challenging problems. Our people have expertise with residential, commercial, and industrial applications and are excited to tell you more.

Register now, it's easy and free [AHR Expo 2023 Registration](#)

In addition to our gas ignition controls and HVAC controls, we will also be presenting ConnectedControls IoT Platform and our newest commercial boiler system. ConnectedControls bring connectivity to previously unconnected appliances and adds value for end-users, service providers, and OEMs. Our commercial boiler system integrates our color graphic touch screen display and platform ignition module to become a comprehensive boiler controller.

## ***Looking forward to A2L***

It is now widely known that A2L refrigerants are mildly flammable, thus creating the need for new safety precautions. For years, Fenwal Controls and UTEC have monitored gas ignition and safely switched off gas appliances in the event of a flame failure.

Now, we are excited to offer OEMs an R-454B sensor that are designed to safely shutdown your cooling systems in the event a leak is detected.

Our new sensors communicate utilizing Modbus to interface with your appliance and operate at ranges from -20°F to 200°F. They have the option to self-calibrate or can be manually calibrated; they include self-test capabilities, an end-of-life indicator, and are designed to last 15 years. Designed to meet UL 60335-2-40 Annex LL, these may be the right sensor for your application.

## ***Who wants more information... from your gas ignition control?***

The short answer is almost everyone, but let's dive into this further.

The second question is often "Why?" and that should be where we really start.

Information helps us make better decisions and hopefully allows businesses to be more productive and ultimately make a larger profit. In the case of a gas fired appliance, if it is not working, then it is most likely down and if it is down, is it costing you money?

- Your warehouse gets cold - Do products get damaged or do the employees want to go home?
- Commercial cooking failure - Does losing an oven or grill reduce your capacity to serve customers or worse, close your doors?
- Pool heater fails - Do your guests complain and maybe don't come back?

All of these are the types of questions business owners may be asking themselves. Information is the key to decreasing down time and communication is the key to a quick resolution.

*Knowing the issue before it becomes a problem is the game changer.  
– Gordon Swanson, General Manager, Fenwal Controls*

Fenwal Controls is taking advantage of the upcoming harmonized standard to improve our controls with communications capabilities. As we roll out these controls, we ready to work with you to provide the maximum value in your application.
